REPLACEMENT FILTER SELECTION

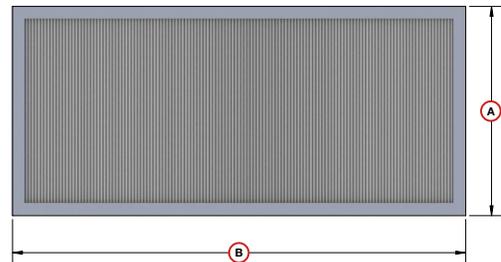

HEPA filters typically have a product label on the filter frame, which includes the serial number, part number, and performance specifications. This label is the most reliable way to obtain the information needed to order a replacement filter.

In the absence of the product label, follow the steps below to gather the filter construction details and refer to the list of available filters on the back of this form to order a suitable replacement through your local Price Representative.

FILTER SELECTION STEPS:

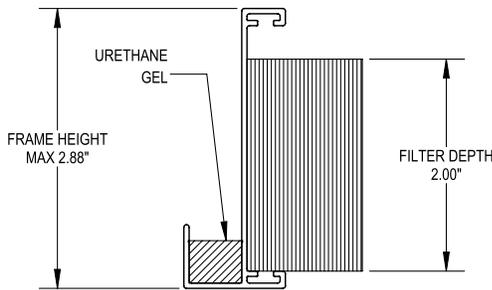

STEP 1. Measure overall filter dimensions:

- Width (A): Parallel to the filter media pleats
- Length (B): Perpendicular to the filter media pleats

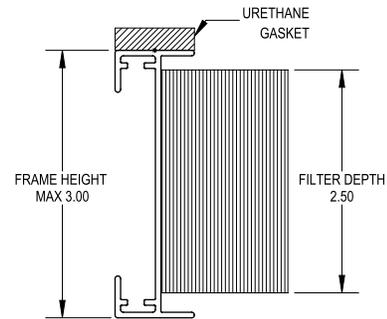

STEP 2. Determine filter seal type:

- RSR-Gel Seal: Roomside replaceable with a gel seal
- BTR-Gasket: Benchtop replaceable with a gasket seal

Filter Depth

- 2" Media Pack Thickness (2.88" frame height)
- 2.5" Media Pack Thickness (3.33" frame height)

Filter Depth

- 2.5" Media Pack Thickness (3.0" frame height)

STEP 3. Confirm filter efficiency:

- HEPA - IEST Type J 99.99% (most common)
- ULPA - IEST Type F 99.9995%

STEP 4. Measure filter media pack thickness:

- 2 in. (most common)
- 2.5 in.

STEP 5. Record your filter information using the table below:

Actual Width of Filter (inches)	Actual Length of Filter (inches)	Filter Seal Type	Filter Efficiency	Pack Thickness	Price Part Number
